OZZI KLEEN Packaged Poly Tank Range

Our expert OZZI KLEEN team can offer you a reliable waste water treatment solution that can be designed and built quickly using innovative and proven technology. Through years of experience with waste water treatment projects, we can provide the advantages of a pre-engineered and modularised design that provides the simplicity of a plug and play waste water treatment plant.

The key to OZZI KLEEN's high performance is the cyclic treatment process which has been specifically developed to make waste water treatment more reliable, effective, and energy efficient.

The OZZI KLEEN packaged poly tank range is manufactured under an annually audited quality assured process in our factory located on the Sunshine Coast, Queensland, Australia. We can deliver everything you need to your site - simply connect it up.

The OZZI KLEEN packaged poly tank range is available in many configurations with the cells in parallel or in a series to cater for higher BOD and hydraulic loadings. We can deliver everything you need to your site - simply connect it up. The OZZI KLEEN packaged poly tank sewage treatment system requires only minimal installation and connection works.

Key Benefits

- ✓ Designed and constructed to demanding Australian standards
- ✓ Robust, heavy duty, compact
- ✓ Plug and play solution
- ✓ Equipped with programmable logic controller (PLC) and touch screen interface
- ✓ Minimal maintenance requirements
- ✓ Manufacturer's warranty
- ✓ No septic odours
- ✓ Caters to peak periods using SBR technology
- ✓ Safe effluent dispersal
- ✓ Capacity can be increased
- ✓ Ideal for towns, resorts, caravan parks, schools, airports, remote locations

How it works

The OZZI KLEEN packaged poly tank sewage treatment plant works as a cyclic aeration biological treatment process using a Sequential Batch Reactor technology (SBR), designed to treat sewage and waste water i.e. toilets, bathrooms, kitchens and laundries. Treated effluent is drawn off from the aeration tanks, disinfected and stored in a separate chlorine contact tank ready for disposal.

As this system is totally aerobic (no septic phase) the process eliminates the production of Hydrogen Sulphide Gas which is highly corrosive when mixed with water. Excess sludge can be drawn off from the aeration tanks and stored in a separate waste sludge holding tank for further digestion.

The OZZI KLEEN packaged poly tank sewage treatment plant consists of a balance tank, a manual or automatic bar screen and multiple cells sized to project specification and includes effluent disinfection and storage.
